ProofPack

Online Purchase & Payment Dispute

Turn receipts, chats, delivery evidence and refund attempts into one clear dispute evidence pack.

PRODUCT CONCEPT

Target customer	Online shoppers who paid for an item or service and now need to prove non-delivery, wrong item, damage, unauthorized charge, refund failure or another transaction problem.
Urgent pain	The user often has a dispute deadline and already has messy evidence scattered across screenshots, receipts, emails, payment confirmations and tracking pages.
Recommended pricing	Launch: $2.99-$4.99 per export. Later: bundle credits or a low monthly plan for frequent users.

Core promise

The product does not sell information. It converts scattered real-world evidence into a structured, reviewable and professional evidence package with minimal manual work.

What the user uploads

- Order confirmation or invoice
- Payment receipt / bank or wallet proof
- Seller or merchant chats
- Email correspondence
- Shipping/tracking screenshots
- Photos of damaged/wrong item
- Refund/cancellation requests
- Any platform dispute messages

What the user receives

- Case summary with transaction amount and issue type
- Chronological event timeline
- Evidence index with Exhibit A, B, C labels
- Clean attachment pages with captions
- Missing-evidence warning before export
- One professional PDF ready for submission or record keeping

User Experience

Recommended flow

1. Choose dispute type

2. Upload files and screenshots

3. Auto-detect dates, amounts, order numbers and parties

4. Review and correct extracted timeline

5. Optionally redact sensitive information

6. Reorder/disable exhibits

7. Generate and download final PDF

MVP - build only what proves demand

- Multi-file upload (images + PDF)
- OCR/text extraction
- Date and amount extraction
- Manual timeline editor
- Exhibit labeling and captions
- PDF generation
- Basic redaction boxes
- Local account or guest session

Explicit non-goals

- Do not tell the user that they will win the dispute
- Do not provide legal representation or definitive legal advice
- Do not contact the merchant or bank in MVP
- Do not fabricate missing facts or evidence

Why the product can be valuable

The buyer already has the evidence. The difficult part is turning dozens of inconsistent files into a coherent record under time pressure. ProofPack sells organization, speed, clarity and export quality - not generic advice.

Recommended monetization test

Launch: $2.99-$4.99 per export. Later: bundle credits or a low monthly plan for frequent users. Use free upload/review and charge at export so the user sees value before paying.

Build Guidance

Shared architecture for all ProofPack products

- One reusable evidence engine with niche-specific case types and PDF templates.
- Private file storage, OCR/PDF parsing, structured fact extraction, timeline generation, exhibit labeling and PDF export.
- Human review is mandatory before export; extracted facts should always remain editable.
- Every summary sentence should be traceable to user-confirmed evidence.
- Avoid storing sensitive evidence longer than necessary; provide user-controlled deletion.
- Design mobile-first because many users will upload screenshots directly from a phone.

Suggested MVP release order

- Phase 1: Upload + manual categorization + exhibit labels + PDF export.
- Phase 2: OCR + automatic date/amount extraction + timeline suggestions.
- Phase 3: Redaction + missing-evidence warnings + payment gate.
- Phase 4: Saved cases, accounts, reusable profiles and niche-specific integrations.

Quality bar

A useful first version must save the user more time than manually creating a Word document. The product should feel trustworthy, neutral and easy under stress. Do not overload the UI with AI branding.

Detailed Development Prompt

Copy the following prompt into a coding agent / app builder and refine implementation details as needed.

```
Build a production-ready web application called “ProofPack - Purchase Dispute”.

GOAL
The product converts messy evidence for an online purchase/payment dispute into one professional PDF
evidence pack. The app is an evidence organizer, not a law firm and not a dispute-decision engine.

PRIMARY USER
A consumer who needs to submit evidence for non-delivery, wrong item, damaged item, refund failure,
unauthorized/incorrect charge, or a similar purchase/payment dispute.

CORE USER FLOW
1. Landing page with one CTA: “Create My Evidence Pack”.
2. User selects dispute type.
3. User uploads JPG, PNG, WEBP and PDF files.
4. Backend extracts text using OCR/PDF parsing.
5. AI/logic detects dates, amounts, order IDs, tracking IDs, names and event descriptions.
6. Build a proposed chronological timeline.
7. Build an evidence index: Exhibit A, Exhibit B, Exhibit C...
8. User can edit every extracted fact, reorder events, rename exhibits and exclude files.
9. Add a simple redaction mode for phone, email, address, card/account numbers.
10. Preview the final evidence pack.
11. Payment gate before high-resolution PDF export.
12. Generate PDF with: cover page, neutral case summary, timeline, evidence index, each exhibit, and
footer/page numbers.

IMPORTANT AI RULES
- Never invent dates, amounts or facts.
- If confidence is low, mark the field “Needs review”.
- Summaries must be factual and neutral.
- Never claim fraud, liability, illegality or guaranteed outcome.
- Preserve original uploaded evidence without modifying underlying content except optional user-approved
redaction in the exported copy.

PAGES
Landing, Create Case, Upload Evidence, Review Timeline, Review Exhibits, Redact, Preview, Checkout,
Download, My Cases, Privacy/Terms.

TECHNICAL SUGGESTION
Frontend: Next.js/React + Tailwind. Backend: Node/Next server actions or NestJS. Database:
PostgreSQL/Supabase. Storage: S3-compatible object storage. OCR: Tesseract or cloud OCR. PDF parsing:
pdf.js/pdf-parse. PDF generation: Puppeteer/Playwright HTML-to-PDF or PDFKit. Payments: Stripe where
supported; make the payment layer replaceable.

DATA MODEL
Case(id,user_id,type,title,status,currency,transaction_amount,created_at)
Evidence(id,case_id,file_url,file_type,original_name,exhibit_label,caption,sort_order,include)
ExtractedFact(id,evidence_id,fact_type,value,confidence,user_confirmed)
TimelineEvent(id,case_id,date,title,description,evidence_ids,sort_order)
Redaction(id,evidence_id,page,x,y,width,height,label)
Export(id,case_id,pdf_url,created_at,payment_status)

MVP SECURITY
Signed upload URLs, encrypted storage, strict access control, automatic file deletion option, malware
scanning, rate limits, no public file URLs, and a clear privacy notice.

DESIGN
Trustworthy, calm, minimal, white background, dark navy accents. Avoid legal-court visual clichés.
Mobile-first upload experience. Show progress clearly: Upload -> Review -> Organize -> Export.

SUCCESS CONDITION
```

```
A first-time user with 20 screenshots and 3 PDFs should be able to create a clear evidence PDF in under 5 minutes with minimal typing.
```

Product note

This blueprint is designed for product development and UX planning. The final service should include appropriate privacy terms, security controls and jurisdiction-specific disclaimers before public launch.
